

Update Project with Backendless SDK for iOS9

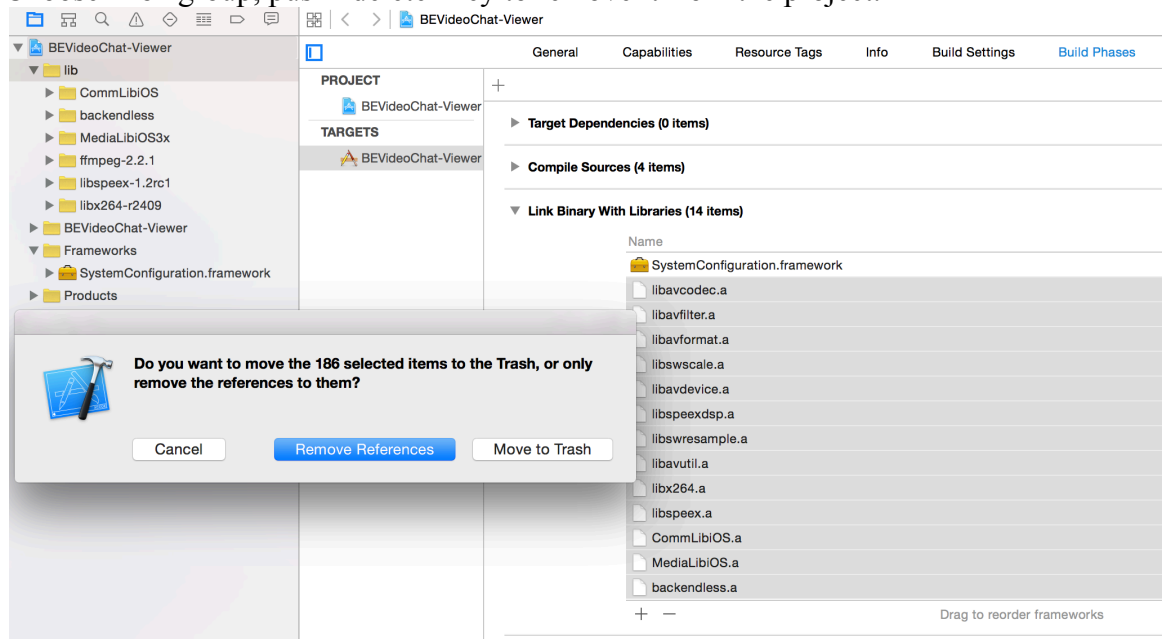

Download Backendless SDK for iOS9 from the [Backendless SDK Downloads page](#) and unzip it.

Remove the Old Libraries from the Project

1. Choose “red” *libsqlite3.dylib* and *libz.dylib* in Frameworks group, push “delete” key to remove it from the project.

2. Choose “lib” group, push “delete” key to remove it from the project.

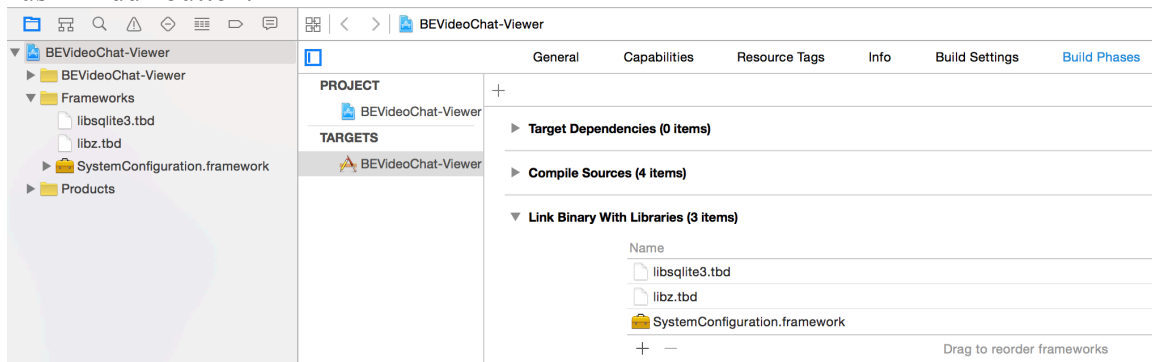

Add the New Libraries to the project

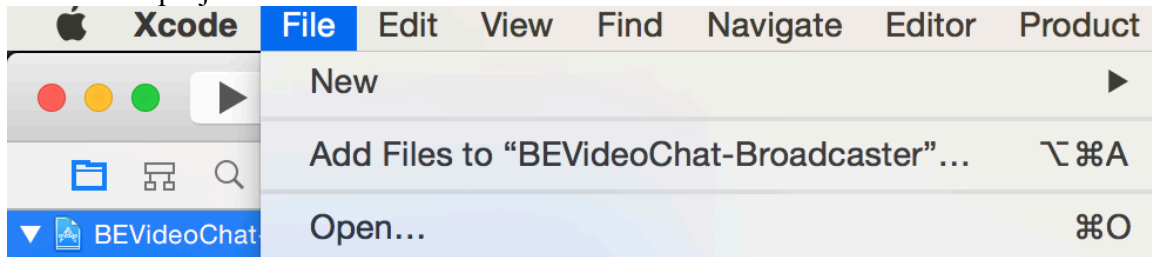

1. Choose the project target, go to Build Phases->Link Binary With Libraries, push “+”, check the following iOS frameworks and libraries:

- *libsqlite3.tbd*
- *libz.tbd*

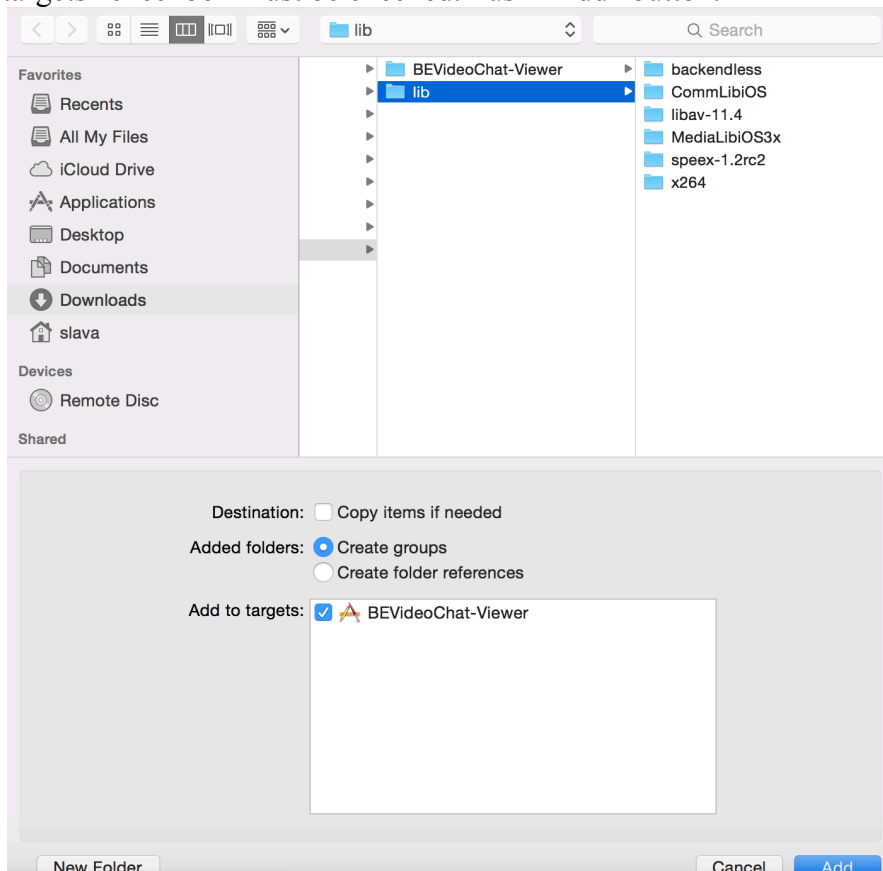

Push “Add” button.

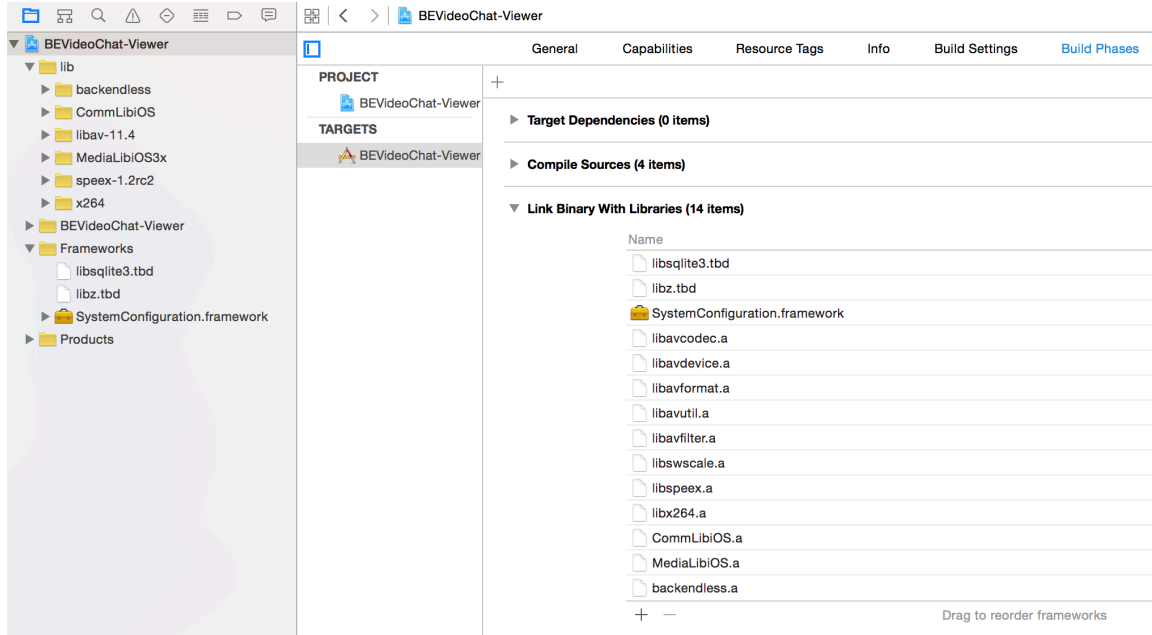

2. Mark the project and choose File- > ”Add Files to ...” menu item:

3. In window choose the “lib” folder in the SDK folder. Make sure that the “Add to targets” checkbox must be checked. Push “Add” button.

4. Make sure the complete list includes the following:

5. Check in Build Settings -> Search Paths -> Library Search Paths
